Ravalli County Commissioners

Dear Ravalli County Board of Health,

I am wondering what you decided about the inconsistent statements I sent to you concerning what the MDFWP personnel stated concerning documenting birth defects on study animals by MDFWP wildlife researchers.

Also, I still would like an answer to the following yes or no questions from the BOH. I made them more general since you are concerned with human health and the RC Commissioners are supposed to be concerned with the health of humans and their livestock according to the laws describing a commissioner's duties.

Is it biologically possible for a congenital condition to be considered a birth defect by biologists in SD and a normal variation by biologists in Montana? Yes or No

I would be interested in your answers to these three questions also to make certain we are on the same page regarding birth defects on children.

Does RCBOH consider an underbite on a mammal of any species (including human newborns) a birth defect? Yes or No

Does RCBOH consider an overbite on a mammal of any species (including human newborns) a birth defect? Yes or No

Does RCBOH consider no scrotum on a mammal of any species (including male human newborns) a birth defect? Yes or No

Thank you for your assistance in saving the newborns especially.

Sincerely,
Judy Hoy
