Ravalli County Commissioners

--	--	--	--	--

I lived in Ravalli Co. for 36 years from 1982 - 2018. My family was raised here, I had a successful 20-year private practice in massage therapy and still own a home in the county. I have many fond memories of life spent in this beautiful Bitterroot Mountain Valley. A year ago I retired and re-located to Port Townsend, WA. to be closer to my children and grand children.

A week ago I returned to Hamilton for a visit. I was first shocked

then deeply sad when I approached Hamilton with "Fresh Eyes". WHAT HAPPENED? The development along the highway is not necessarily new. When I lived here, like the proverbial frog in boiling water, I didn't see so clearly while it was happening but consistently voting for planning and zoning and against large development in the County (to no avail).

What I saw with "fresh eyes" was a BUTT UGLY Highway 93 (northern) Corridor - entering town. It looked like so many other run down towns I've driven through on road trips.

"WHAT HAPPENED" is a long-term lack of planning, the unwillingness of citizens and County leadership to plan for future generations, a lack of respect

1

The first part of the document discusses the importance of maintaining accurate records. It emphasizes that proper record-keeping is essential for the effective management of any organization. This section covers various aspects of record management, including the selection of records, their classification, and the methods used to store and retrieve them. The text also highlights the role of records in legal proceedings and the need for records to be accessible and reliable.

The second part of the document focuses on the challenges of record management in the digital age. It discusses how the volume and variety of digital records have increased significantly, making it more difficult to manage and secure these records. The text explores various strategies for digital record management, such as the use of metadata, digital preservation techniques, and the implementation of robust security protocols to protect sensitive information.

The final part of the document provides a summary of the key points discussed and offers recommendations for best practices in record management. It stresses the importance of a proactive approach to record management, where records are identified and managed from the beginning of their lifecycle. The text concludes by encouraging organizations to regularly review and update their record management policies to ensure they remain effective and compliant with current regulations.

or maybe even the lack of recognition
of the natural beauty that HAD
Surrounded us.

My request to you is next time
you approach Hamilton, come in
with your own "fresh eyes" and
see what you see. Do you feel
good about what we've collectively
put together or perhaps, as I recently
did, recognize and own how
we have Spoiled our own nest?

Nancy Lutz

1. The first part of the paper is devoted to a discussion of the general principles of the theory of the structure of the atom. It is shown that the structure of the atom is determined by the laws of quantum mechanics and the laws of electrodynamics.

2. In the second part of the paper, the structure of the atom is calculated for the case of a hydrogen atom. It is shown that the energy levels of the hydrogen atom are given by the formula $E_n = -\frac{13.6}{n^2}$ eV, where n is the principal quantum number.

3. In the third part of the paper, the structure of the atom is calculated for the case of a multi-electron atom. It is shown that the energy levels of a multi-electron atom are given by the formula $E_n = -\frac{13.6}{n^2} Z^2$ eV, where Z is the atomic number.

4. In the fourth part of the paper, the structure of the atom is calculated for the case of a diatomic molecule. It is shown that the energy levels of a diatomic molecule are given by the formula $E_n = -\frac{13.6}{n^2} Z^2$ eV, where Z is the atomic number.
