>

> Both the Blue Joint and Sapphire WSA's have more value in their wild state for clean water wildlife, botanical variety, and recreation. They benefit all people in their wild state! Open it up with roads, to extractive industry and ORV use and the public loses and only individuals gain or benefit.

> The areas benefit All now! Clean watersheds, fisheries, wildlife, Scenic beauty, hiking, camping, backpacking, horseback riding opportunities are what draw and keep people here! Not logged over disturbed lands and roads. The scenic beauty, and wildness is why the Lab and other clean industry locate here.

> The Sapphires are an important biological corridor. The lives that depend on it's remaining wild can't be here to testify. Keeping it wild is a multiple use; water wildlife recreation jobs outfitting and guiding and other service jobs.

> Once you open a wilderness with roads, you can Never get it back. They aren't making wilderness anymore! That is why people come Here.

> The WSAs have intrinsic value for water a wildlife corridor botanical variety and the peace to sustain us. **Nancy Oesau, Hamilton, MT**
