To whom it may concern,

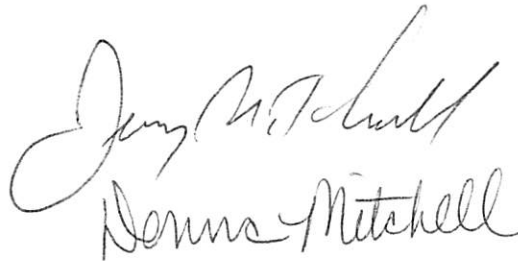

We are concerned about the safety and health effects of living close to the tower. We have never seen 100% proof that there are not long term health problems. We have only seen the towers in very rural areas not 125 yards away. They were going to put a tower over by Haines football field and the uproar from the residents and the Bitterroot College made them choose a different location.

There has been a couple of times in the summer where we could not have our windows open because of a horrible high pitched whistling noise. Will this increase if they add to tower? Will this tower be safe to be around? If you can't answer this with real answers then not only should it not be added on to but maybe moved to another more rural location. We have a daycare and a group home across the street from our house that is also concerning.

We are also concerns that it will decrease the value of our home because of all the reasons listed above.

We are also wondering where a letter to us was before this was constructed. It really just sprung up without anybody knowing anything about it, but now you want to add on to it to make it higher and want our input. Many people have told me building it in the first place violated many laws and it wasn't done right with the zoning.
